# The evolution of Time-Lapse at Boston Place

First Clinic London  
100% Time-Lapse

2013

First Clinic Worldwide  
designed around Time-  
Lapse

First Clinic UK  
100% EmbryoScope

2014

First GERI Pregnancy UK

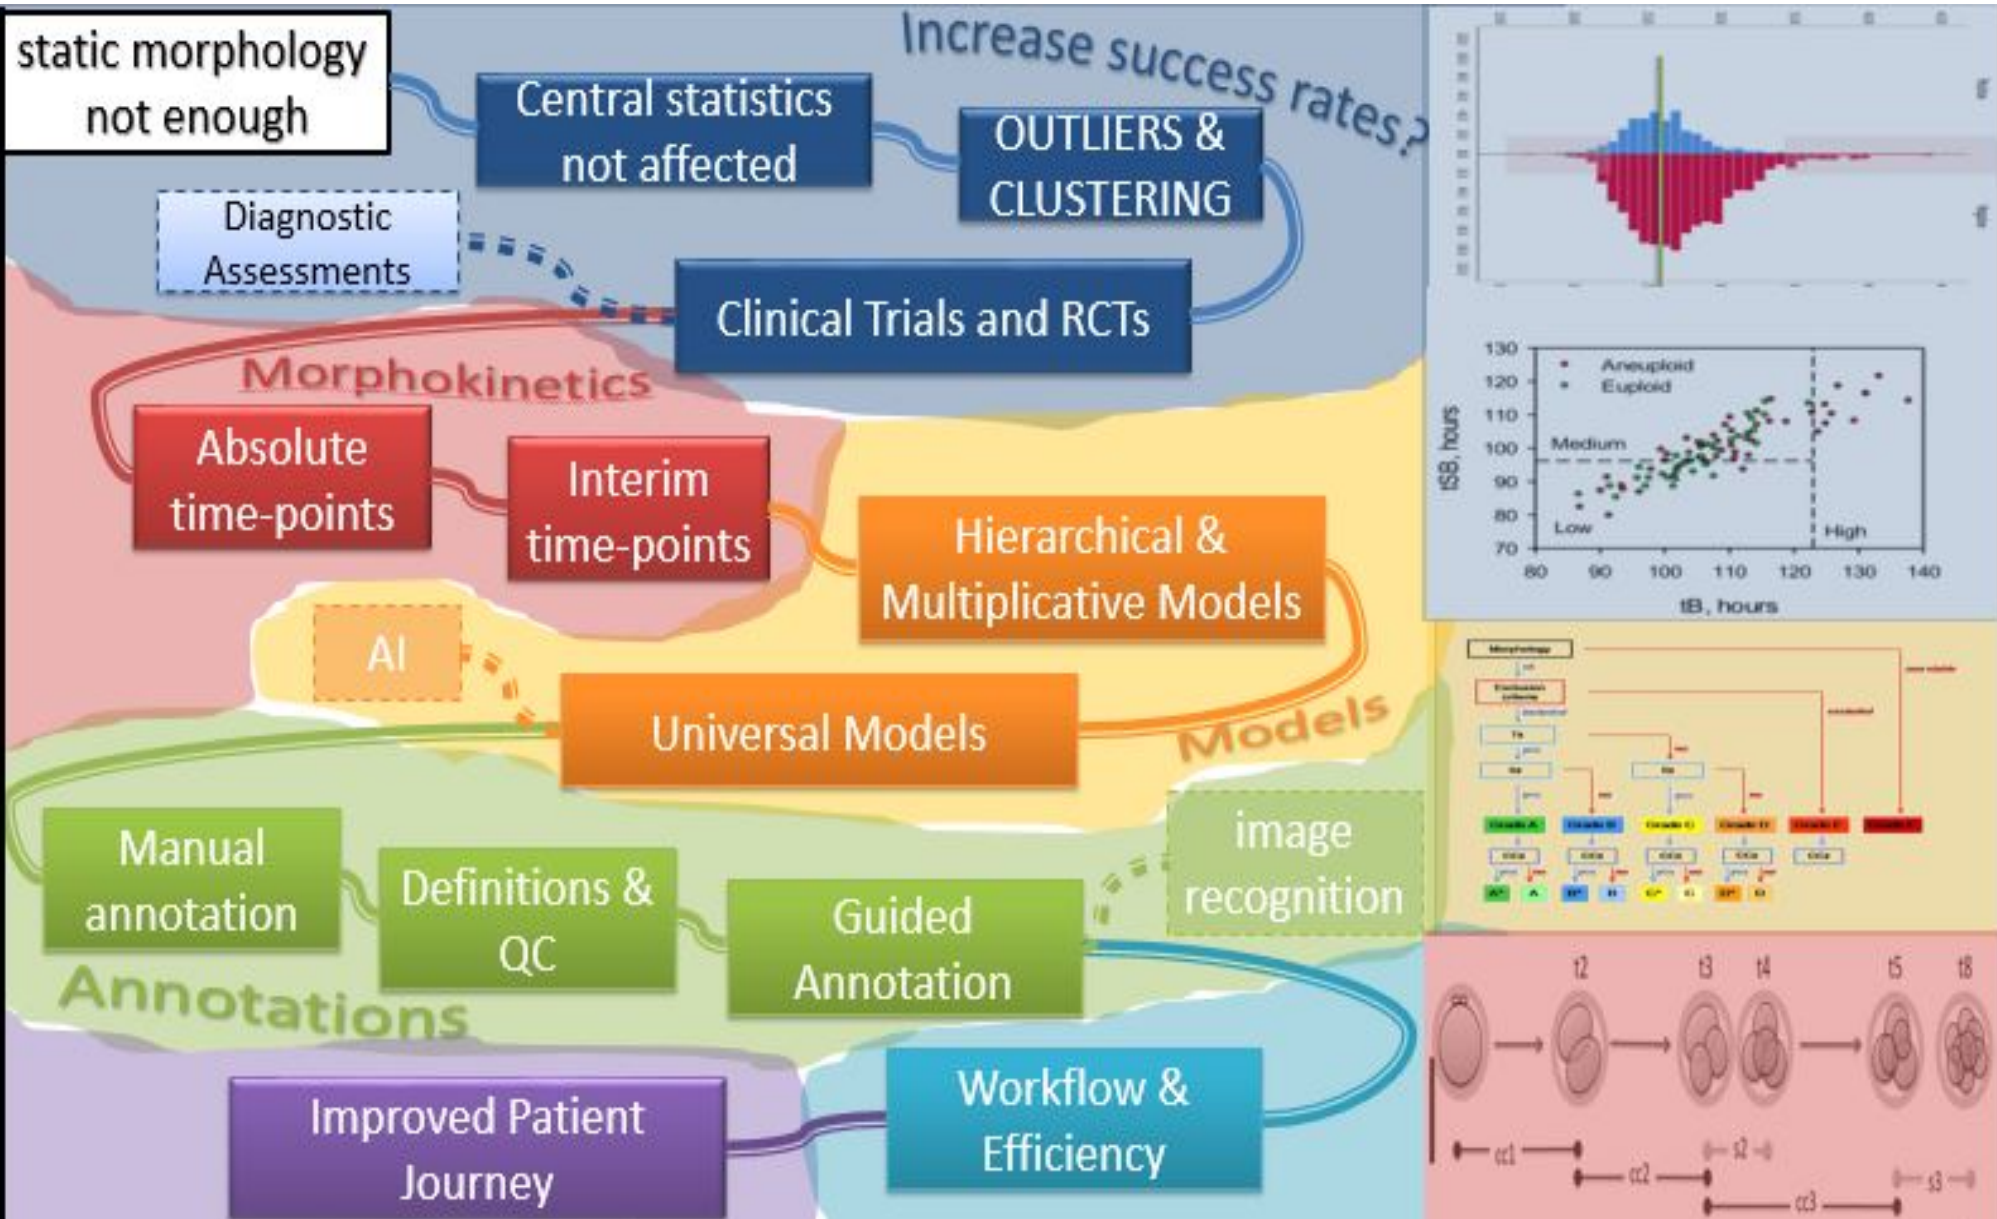

2016

First World EmbryoScope+ (post validation)

October 2016

# Evolution of Time-Lapse

Efficient workflow

- ✓ Retrospective n=**17816** fresh cycles
- ✓ 4 IVF clinics from 2006 to 2010

# Procedures occur at the best time for the embryo

Day 0

Time flexibility to perform stripping, IVF, ICSI

Day 1

Time flexibility to perform Day 1 checks

Day 2-4

Time flexibility of when to check embryos

Time flexibility of when to call patients

Early ICSI → More Day 5 Blastocysts

Day 5-7

Time flexibility of when to biopsy

Time flexibility of when to freeze

# Time-Lapse as a tool to improve PGS/Vitrification Workflow

# Remote Access

# How much does it cost you not to be 100% time-lapse?

New clinic in London would save money within 1 year

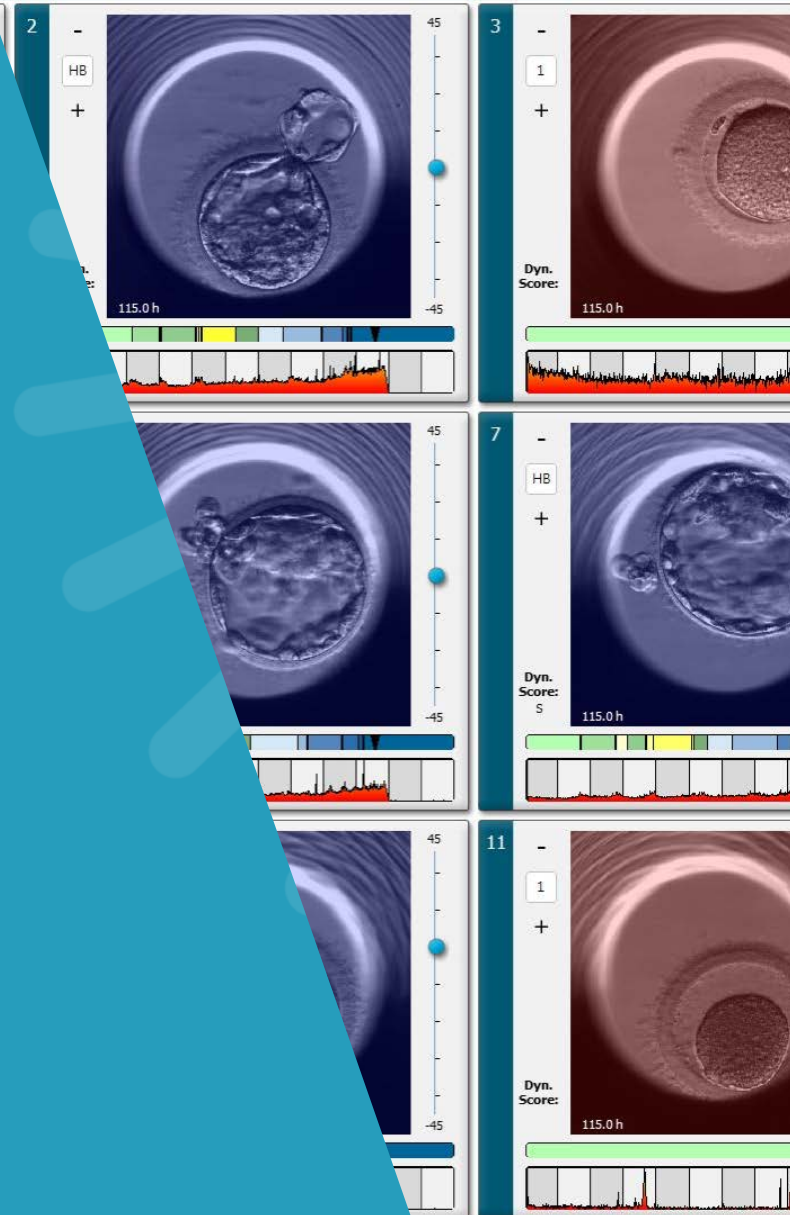

**Not included:** savings in consumables, increased patient referrals, 6% patients not requiring FERCS, other intangible benefits (i.e. reduced recruitment costs, staff morale, increased patient satisfaction)

**Depends on:**

Country? Tax? Staff costs? Expertise availability? How many cycles? Current practice and current performance?

# Enhanced Patient Journey

# Involve your patients

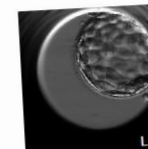

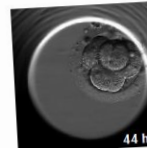

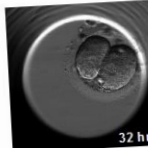

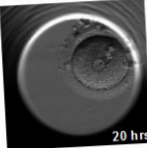

**Patient information - Patient treatment report** 2013-12-11  **boston place**

**Embryo summary**

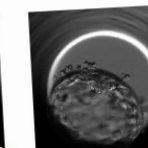

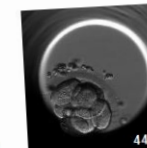

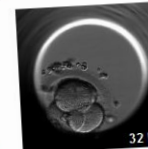

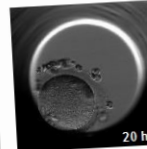

Procedure	Number
Embryos Transferred	2
Embryos Frozen	3

**First embryo for transfer**

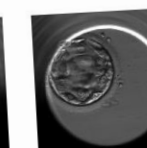

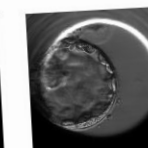

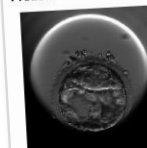

20 hrs 32 hrs 44 hrs Last

**Second embryo for transfer**

20 hrs 32 hrs 44 hrs Last

**Frozen**

20 hrs 32 hrs 44 hrs

Please note that if you have had embryos frozen with us we will be in contact on an annual basis to ask if you wish to extend storage (There is an annual storage fee).  
It is vital that you keep the clinic up to date with any changes in details or circumstance. We can be contacted at Boston Place Clinic, 20 Boston Place, LONDON, NW1 5ER.

We hope that you had a pleasant treatment cycle with us at the Boston Place Clinic and we would like to wish you the best of luck.

**EmbryoScope™**  
The first clinic in the UK to offer EmbryoScope™ treatment to all patients.

Improved patient expectation management

63%

Improved patient expectation management

<1%

Increased precision in  
monitoring embryo  
progression

# Morphology

DAY 1

## Time-Lapse

# Cleavage Patterns

**Reverse  
cleavage  
(RC)**

**Extruded  
Material**

**Failed  
Division (FD)**

**Multi  
nucleation**

**Wobble (W)**

**Twist-and-  
crumble (TnC)**

**Perivitelline  
threads**

**Direct cleavage  
1-3+ (D1-3)**

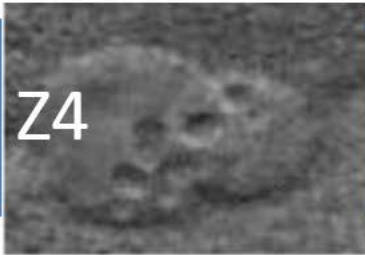

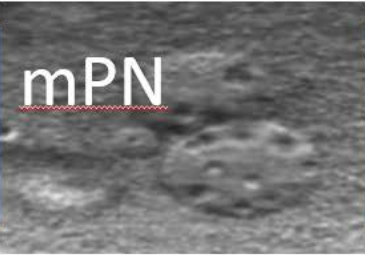

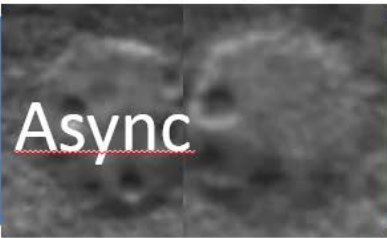

**Direct cleavage  
2+ (D2+)**

**Other  
morphological  
features**

	Low Incidence	Embryo Quality	Blast Rate	Imp Rate	Ploidy Rate	
 Z4	5% 177/3970	≈	half ↓	<2% ↓	↓ Euploid v	Counsel patients of almost futile chances of pregnancy
 mPN	1% 53/4699	≈	≈	≈	? Euploid v	Consider for treatment
 Async	5% 53/4699	Less than half ↓	↓	? Euploid v	? Euploid v	Counsel patients of reduced chance of good quality embryo
	Impaired embryo development Healthy live birth not verified due to reduced # of embryos for transfer					

# Increased efficacy in embryo selection

# Clinical validation of embryo culture and selection by morphokinetic analysis: a randomized, controlled trial of the EmbryoScope

Irene Rubio, Ph.D.,<sup>a</sup> Arancha Galán, Ph.D.,<sup>a</sup> Zaloa Larreategui, Ph.D.,<sup>b</sup> Fernando Ayerdi, Ph.D.,<sup>b</sup> Jose Bellver, M.D.,<sup>a</sup> Javier Herrero, Ph.D.,<sup>a</sup> and Marcos Meseguer, Ph.D.<sup>a</sup>

<sup>a</sup> Instituto Universitario IVI Valencia, University of Valencia, Valencia; and <sup>b</sup> IVI Bilbao, Bilbao, Spain

## Does the addition of time-lapse morphokinetics in the selection of embryos for transfer improve pregnancy rates? A randomized controlled trial

Linnea R. Goodman, M.D., Jeffrey Goldberg, M.D., Tommaso Falcone, M.D., Cynthia Austin, M.D., and Nina Desai, Ph.D., H.C.L.D.

Department of Reproductive Endocrinology and Infertility, Cleveland Clinic, Beachwood, Ohio

Outcome	TMS group	Control group	RR	P value
All cycles with oocyte retrieval	438	405		
Pregnancy (% of all treated cycles)	61.6 (56.9–66.0)	56.3 (51.4–61.0)	1.09 (0.98–1.23)	.12
Ongoing pregnancy (% of all treated cycles)	51.4 (46.7–56.0)	41.7 (37.0–46.6)	1.23 (1.06–1.43)	.005
All transfers	415	373		
Pregnancy (% of all transfers)	65.3 (60.6–69.7)	61.1 (56.1–65.9)	1.07 (0.95–1.19)	.22
Ongoing pregnancy (% of all transfers)	54.5 (49.6–59.2)	45.3 (40.3–50.4)	1.20 (1.04–1.39)	.01
All pregnant cycles	271	228		
Early pregnancy loss (% of all pregnancies)	16.6 (12.6–21.4)	25.8 (20.6–31.9)	0.64 (0.45–0.91)	.01
All transferred embryos	775	699		
Implantation rate (% of all transferred embryos)	44.9 (41.4–48.4)	37.1 (33.6–40.7)	1.43 (1.05–1.39)	.02

Note: Results shown as proportion with 95% confidence limits in brackets, relative risk (RR) with 95% confidence limits in brackets and the corresponding P value (Fisher's exact test). Total number of cycles are also presented in brackets.

Rubio. Clinical validation of EmbryoScope. Fertil Steril 2014.

1292

VOL. 102 NO. 5 / NOVEMBER 2014

Clinical outcome	TLM	CS	P value
All transfers (day 3 and 5)	n = 119	n = 116	
CPR	81/119 (68.1%)	73/116 (62.9%)	.41
All transfers, <40 y old	n = 110	n = 110	
CPR	79/110 (71.8%)	72/110 (65.5%)	.10
IR	119/211 (56.4%)	99/205 (48.3%)	.31
Blastocyst transfers	n = 91	n = 89	
CPR	67/91 (73.6%)	61/91 (67.0%)	.33
IR	96/173 (55.5%)	83/162 (51.2%)	.44
Pregnancy outcomes	n = 81	n = 73	
Viable singleton pregnancy	48 (59.3%)	48 (65.8%)	.23
Viable twin pregnancy	29 (35.8%)	21 (28.8%)	
Viable triplet pregnancy	2 (2.5%)	1 (1.4%)	

through viewing of time-lapse video footage. In the TLM group, patients with the plan for blastocyst transfer had their top-quality embryos determined by morphology and then the morphokinetic score was used to preferentially rank the best embryos for transfer. Positive and negative features were as-

+9.2%  $p=0.01$

+5.2% NS

- Negative points: cc2 <5 hours (−1), presence of multinucleation (−0.5), presence of irregular division (−0.5).
- Positive points: t5 45.8–57.0 HPI (+1), s2 0.0–0.1 hours (+1), s3 1.4–7.0 hours (+1), tSB <100 HPI (+1).

# EmbryoScope improves live birth rate

Are culture conditions improved over conventional culture due to uninterrupted?

Time lapse improves chances of live birth.

CARE data >1000 Live Births (1/5/11-28/2/14)

In house retrospective analysis

CAREfertility

Use of EmbryoScope and selection models is increasingly effective with advancing maternal age
